

6 Reasons to Choose Ambit Managed Cloud Services

When it comes to how you consume powerful risk systems like FIS' Ambit Focus, things are looking up. In a fast-changing banking industry, public cloud-based services offer a whole range of advantages over traditional, on-premise software.

If you ask us to run Ambit Focus for you in the public cloud, you will:

1

Win back money and time.

Moving your risk system from an in-house data center to the public cloud will cut your technology costs by up to 30 percent – and save your own IT team a great deal of hard work and responsibility. We will host, operate, maintain and update Ambit Focus on your behalf and keep it running smoothly around the clock.

2

Reduce wastage.

As most risk calculations run only for short periods at night, banks use their risk infrastructure only 20 percent of the time, leaving hardware sitting idle, meanwhile charging you for the privilege. With FIS, you only ever pay for what you use of the cloud's capacity, when you use it. You can easily switch off servers, or scale up and down to new requirements.

3

Get a one-stop service.

There's a lot involved in running a solution in the public cloud, but we handle it all under a single contract. For one monthly bill, we both manage the relationship with the cloud provider – either Microsoft or Amazon – and support our application within the cloud environment. If there's a problem, call our service desk as the single point of contact to have all problems solved.

4

Keep data secure.

As part of your contract, we take full responsibility for your data's security and, with our extensive experience, we are expert at keeping it safe. All you need to take care of is managing who has access to the application. And if your regulator requires you to store data in-country or at a particular data center, we can make that happen.

5

Stick to high standards.

From the start, we'll agree acceptable service levels with you, such as for system availability, and then closely monitor and report on the performance of our service. As well as managing and resolving incidents quickly, we'll make sure you stay compliant with local outsourcing regulations.

6

Tap into industry-leading expertise.

At FIS, we know what we're doing in the cloud, with a central team helping us drive standards, build scale, and improve efficiency and quality. We provide fully managed services for more than 3,750 clients across 50 data centers – and manage 28 petabytes of storage across over 71,000 compute instances.
