

FIS ENDPOINT THREAT DETECTION

A MANAGED SECURITY SERVICE FROM FIS

As Cyber Attacks Get More Sophisticated, So Must Your Threat Monitoring

With 30 percent of data housed outside the firewall on endpoint devices, IT must deal with security and communications in real time, across varying locations and bandwidths and an ever-increasing number of devices. Traditional malware prevention tools simply aren't enough.

Deploy IT resources smartly, while reducing the likelihood and impact of an attack, with **FIS™ Endpoint Threat Detection**, a comprehensive early-warning system that monitors all your endpoints through a powerful combination of technology, behavioral detection, and human expertise.

Add Another Security Layer Quickly

Supplement your security efforts by opting-in to this managed service, which FIS can deploy across your system with no additional infrastructure required.

Track Threats in Real Time, Across the Globe

24/7/365 monitoring of your entire system and its millions of endpoints throughout the world so you know of threats the moment they emerge.

Save Internal Manpower

Expert security analysts review every suspicious event to confirm actual threats and collect intelligence for the response and future prevention.

Rapid Communication & Response

Get actionable intelligence and recommendations to respond to threats within minutes, no matter the location or endpoint.

Gain Full Visibility into Your Threat Matrix

Access detailed reports on number of processes and endpoints analyzed, threats, false-positives, actions taken and resolution.

Reduce the Likelihood and Impact of an Attack

A Proactive, Layered – and Complete – Approach

FIS Endpoint Threat Detection is just one piece of FIS' comprehensive Managed Security Services (MSS) suite, which allows clients to take a dual proactive and preventive approach to addressing information and cyber security, reducing data loss and potential downtime from incidents.

For many FIS clients, MSS supplements their in-house information security department, providing state-of-the-art, vigilant, around-the-clock monitoring and detection for complete security – and peace of mind.

MSS includes more than a dozen categories of protection solutions. Here are just a few:

Managed Security Awareness

Most threats rely on human error or carelessness to breach security procedures. FIS tests your employees on a variety of social engineering schemes – phishing, smishing, vishing, spoofing, etc. – and provides awareness training to strengthen your weakest links.

Vulnerability Management

Internal or external sources can easily exploit your programming code. To help you proactively manage your network, FIS scans your system regularly for internal and external code vulnerabilities and misconfigurations.

Cybersecurity Risk Manager

Working with your IT team, FIS performs a complete audit of your cybersecurity program, its threats, and mitigating controls, to determine potential risk to the organization.
