

FROM LEGACY SYSTEMS TO UNIFIED PLATFORM: HOW TO BRIDGE THE GAP

Aging cleared derivatives systems make it tough to handle increased volumes, scale with market fluctuations and efficiently manage business across assets.

IT'S TIME TO CROSS OVER TO A MODERNIZED SOLUTION – BUT HOW CAN YOU

▶ SAFELY GET TO THE OTHER SIDE?

Today, it's all about a modern, open design that speeds up processes, sends costs plummeting and boosts client satisfaction.

Find the right fit, then get in the fast lane when you:

- ✔ Seek a fully **modernized, modular platform** with integrated components
- ✔ Confirm that the **functionality** can be easily **expanded** and covers **cross-assets**
- ✔ Ensure that the system can handle volume spikes and is cloud-based to **scale as you grow**
- ✔ Validate **interoperability** with various applications and in-house systems
- ✔ Determine if the platform covers the **local and global markets** you serve
- ✔ Speak to firms that are **live and actively using** the system
- ✔ Confirm the solution's **best practices** and **proven track records**

▶ AVOID SPEED BUMPS?

Trying to cross the bridge from legacy to unified without expert guidance is costly, time-consuming and fraught with risk. To ensure a smooth journey, you need to select your partner carefully.

- 1** Choose an industry leader that demonstrates an in-depth understanding of the old and new systems
- 2** Demand straight answers to your questions about how the conversion project will work & global staffing/support
- 3** Proceed only when you're sure your legacy components, third-party interfaces & downstream feeds will be compatible in the new, single-platform environment
- 4** Make sure the provider has the automation tools to reduce risks and efforts associated with the migration

FIS® KNOWS HOW TO BUILD SOLID BRIDGES

With 47 of the world's largest firms relying on FIS Cleared Derivatives Suite, we have extensive experience leading clients through modernizations in a cost-effective way that minimizes risk.

LET'S SOLVE CLEARED DERIVATIVES
